

ABSTRACT

An enhanced graphical icon system depicting the proper document/paper placement and orientation on the glass or in the auto document feeder for a moper/copier control panel. The enhanced graphical icon system includes a visual feedback control panel display and an orientation indicator. An original document is accurately described through utilization of original settings button by the automatic detection or manual selection of the appropriate document size, number of sides, page type and page orientation that correspond to the original document. Once the document size is determined, orientation indicator displays to a user the proper location for placing the document, either on the glass or in the ADF, so as to make an accurate copy.
